

It is ironic, or dichotomous, that the FCC, who is charged with making sure BPL technology adheres to technical standards, will be the same agency that must handle the thousands of interference complaints on behalf of legitimate, licensed services using the spectrum BPL will undoubtedly cause RFI to. Your engineers are already aware of the massive RFI potential BPL will unleash, even with the mandated field-strength levels. In my over 30 years in the electronics industry, I've never seen such an ill-conceived RFI trojan horse as BPL. It has been shunned worldwide.

Sincerely,

Charles M. Dawson (KG5JJ)
